Original contributions from leading academicians, practitioners and accounting associations from around the world make this handbook a unique source of information on international accounting education and certification processes. A uniform format in most of the chapters allows for easy comparison between countries. This volume documents the development of accounting education and practice at country and global levels; studies the sensitivity of accounting education and practices to the unique socio-economic needs of its environment; and allows comparative studies at a time when attempts have begun to harmonize accounting education internationally. statements first, rather than starting with the Accounting Cycle (although the Accounting Cycle is thoroughly covered in Chapters 3 and 4). This innovative approach quickly establishes how a financial statement communicates the financing, investing, and operating activities of a business to users of accounting information. Throughout, the text clearly demonstrates the importance of accounting to society and the relevance of accounting to students' future careers. The authors identify a finite set of tools necessary to make business decisions based on financial information: the Decision Toolkit. This toolkit is consistently re-introduced throughout the text, logically sequenced to take full advantage of the tools presented in earlier chapters, and summarized in the final chapter. This thorough integration of the use of financial statements for decision-making makes this one of the most user-oriented texts currently available. Before you buy, make sure you are
